Widely studied and published anti-adhesion properties of Hemostasis’ N,O-carboxymethyl chitosan (NOCC):

- Reduction in postsurgical adhesion formation after cardiac surgery by application of N,O-carboxymethyl chitosan. Acquired Cardiovascular Disease. 2010;140:801-6. Juan Zhou, MD, PhD, J. Michael Lee, PhD, Patricia Jiang, BSc, Susan Henderson, BSc, and Timothy D. G. Lee, PhD.

- Reduction in postsurgical adhesion formation after cardiac surgery in a rabbit model using N,O-carboxymethyl chitosan to block cell adherence. Cardiopulmonary Support and Physiology. 2007;135:777-783. Juan Zhou, MD, PhD, Robert S. Liwski, MD, PhD, Clive Elson, PhD, and Timothy D. G. Lee, PhD

- Reduction in postoperative adhesion formation and re-formation after an abdominal operation with the use of NOCC. Surgery. 2004;135:307-12. Juan Zhou, MD, PhD, Clive Elson, PhD, and Timothy D. G. Lee, PhD
