

Designed specifically for providing localized drug delivery in the sinus frontal ostia.

VECTRA™ puts localized drug delivery in the hands of surgeons.

VECTRA™ was specifically developed to administer medicinal substances to treat nasal disorders. The patented VECTRA™ microsponge is supplied in a compressed tubular design preloaded on one end of an insertion tool. The opposite end of the tool has a Luer fitting which is connected to a syringe containing the medicine to be delivered. The tool is used to place the VECTRA™ microsponge in the frontal ostia. Once in place, the medicine can be delivered to the VECTRA™ device. As the medicine hydrates the VECTRA™ microsponge, the microsponge expands to conform to the anatomy of the ostia. The tool is then removed and the VECTRA™ microsponge remains in place. The intimate contact allows for localized drug delivery to the desired target area.

ORDERING INFORMATION

Part Number:

9210864

Description:

VECTRA™ F drug delivery microsponge

How Supplied:

VECTRA™ F drug delivery device is packaged with two (2) sterile, single use units per box. One (1) sterile unit contains one (1) VECTRA™ microsponge and one (1) frontal sinus insertion tool. VECTRA™ is terminally sterilized by gamma irradiation.

CAUTION: Federal (U.S) law restricts this device to sale by or on the order of a physician. For detailed information regarding indications for use, warnings and precautions, see Instructions for Use.
